# From unwritten rules to shared agreements.

Lo-fi screen flow: browse the household, then start a specific proposal.

### 01 / HOUSE AGREEMENTS

[All rules] [Agreed] [Discussing]

**Quiet evenings**

Noise / Agreed / 3 of 3 roommates

**Overnight guests**

Guests / Discussing / 1 of 3 roommates

+ Propose a rule

Open a card to read and respond.

### 02 / PROPOSE A RULE

Title

Give a heads-up for overnight guests

Category [ Guests v ]

**What are we agreeing to?**

Explain a specific, realistic expectation.

Share proposal

Starts with the proposer's agreement.

**FLOW: House agreements > Propose a rule > Share > Discussing (1/3)**

# A rule needs a conversation.

Lo-fi screen flow: review the same version, respond, and help new roommates settle in.

**03 / RULE DETAIL & DISCUSSION**

## Overnight guests

Let the flat know a day before a guest stays.

Jirapat: waiting Mia: agrees Alex: waiting

I agree | Suggest a change

**Discussion**

Ask a question or explain your needs.

An edit clears old votes. Everyone responds again.

**04 / MOVING IN**

## Welcome to the flat

[ ] Read the agreed rules

[ ] Introduce your routine

[ ] Ask about anything unclear

[ ] Make your first proposal

Explore house agreements

Checklist progress stays in this browser.

**AGREEMENT LOGIC: 1/3 or 2/3 = Discussing. 3/3 = Agreed.**

Changing the text starts a new decision; earlier acceptance does not transfer.

# Design decisions & a real test plan.

Project status and reasoning - based on the Week 3 brief, not completed interview research.

---

## Starting point

A new roommate needs to learn unwritten household rules, but existing roommates do not fully agree on them either. The design should make expectations visible and let everyone respond.

## Assumptions to test

Different expectations about cleaning, noise and guests may cause friction. People may avoid speaking up. These are hypotheses. The Week 3 interview examples are fictional; no participant findings are claimed.

## Why these screens?

Browsing rules helps newcomers find expectations. Proposals make vague expectations specific. Comments let people explain disagreements. Unanimous agreement keeps one person from imposing a rule. Revisions clear votes so approval applies to the exact current text.

## Implementation scope

This is the first implemented build for this project, created now from the Week 3 brief. No earlier v1 or completed Week 4 research was supplied. Demo roles simulate three roommates on one device. Local browser storage persists changes; there is no shared backend, login or cross-device synchronization.

## Short user test - not conducted yet

Ask a tester to find the kitchen agreement, propose a guest rule, and request a revision. Observe completion, hesitation and whether they understand Discussing versus Agreed. Record actual comments in Test & feedback, then export the notes. Use these results to choose the next changes.
